Premium Okta Training

Don't miss a unique opportunity to make your Okta skills rock solid. Spend two days learning and working hands-on with our experts.

Courses

Okta Essentials for System Administrators: Learn how to set up and administer users and directories, configure application SSO and provisioning, and configure security policies.

Okta Platform for Developers: Learn how to integrate custom web applications with Okta's identity management and security APIs, using best practices and established workflows.

Standard Registration: $1600

Details

Format: Instructor-led class with hands-on labs

When:
Sunday, August 28: 8:00AM to 5:30PM
Monday, August 29: 8:00AM to 5:00PM

Breakfast and lunch for both days are included in your course registration fee.

Registration: Register and pay using the standard conference process, online at oktane16.com

Where: Pre-conference training will be held in an offsite state-of-the-art classroom. Round trip transportation will be provided to and from the Aria.

Setup Requirements: Okta provides access to an Okta tenant, and virtual machine to complete labs using the standard conference process, online at oktane16.com

CPE Credits: Oktane16 is an Official (ISC)2® CPE submitter. Attendees will be required to provide their (ISC)2® member number at registration and Okta will submit names directly to CPE.

Okta Essentials

A foundational course designed to ensure your implementation success.

> Training lab was outstanding. Gave me an efficient and effective way to get up to speed with the product.
>
> — Attendee in Okta Essentials for Administrators

Course Overview

Okta Essentials is a must for system administrators and anyone else who might be responsible for setting up Okta.

Get hands-on experience creating and configuring users and applications, plus learn about the best practices and troubleshooting techniques to maximize your Okta investment.

You'll access a custom Okta training account and leading third-party software applications to practice key setup and configuration tasks.

Online course description

Who should attend

Okta system administrators

Implementation project team members

Prerequisites

Basic familiarity with Active Directory

Basic networking knowledge

Participants will learn how to:

• Integrate Okta into your organization

• Identify the features and functions of Okta

• Create and configure user accounts

• Integrate external directories

• Create and manage groups

• Configure applications for SSO and provisioning

• Configure controls, such as password policies and multifactor authentication

• Customize Okta to match your company brand

• Troubleshoot Okta

• Monitor application usage and analyze authentication errors

Okta Platform for Developers

A foundational course for creating secure API driven authentication and user management for any app.

> " This course really gave our team a great foundation to explore Okta's API-driven capabilities as we move forward in our journey to enable SSO with our partners and end users. Really helped us to connect the dots to connect everything on our side.
>
> — Attendee in Platform for Developers course

Course overview:

Okta Platform is a must for developers and anyone else interested in how to integrate web applications with Okta's identity management and security APIs.

Get hands-on experience performing essential administrative functions required to successfully incorporate use of the Okta platform, such as configuring security parameters and policies, executing user management tasks and obtaining API tokens.

To explore the capabilities and benefits of working with Okta Platform APIs, you build integrations from a web application to the Okta login and registration services, using the Okta SDK and working directly with the JSON documents and HTTP requests.

Common business and technical use cases, troubleshooting, and best practices are discussed.

Who should attend:

Developers

Architects

Technical project managers

Prerequisites

Understanding of REST integration concepts

Experience with C#, Java, or another object-oriented programming language.

Course set up requirements

Students must have a Microsoft Account (sign up BEFORE class at **https://signup.live.com**)

Okta provides access to an Okta tenant, and virtual machine to complete labs.

Participants will learn how to:

• Describe key features and functions

• Create a service account within an Okta tenant

• Configure security controls, such as password policies and multifactor authentication (MFA)

• Create an API token to manipulate your Okta tenant using API calls

• Use Postman to learn about the Okta API collections, such as users, groups, and events

• Plan, design, and develop, sign on and registration pages using the Okta API using the Okta SDK and the underlying JSON documents and HTTP requests.

• Configure a sign on page using the Okta Sign-In widget

• Incorporate best practices to maximize Okta API and SDK code
