

NETMOTION & OKTA

An integration to keep your business secure in today's remote working world

Okta + NetMotion have come together to enable today's organizations with best-in-class security for remote workers, paired with an unparalleled user experience.

Known for its expertise in adaptive multi-factor authentication (MFA) and single sign-on (SSO) technologies, Okta's Identity Cloud range of products are trusted by thousands of organizations worldwide. NetMotion's mobile-centric platform, which consists of a VPN and a software defined perimeter (SDP) solution, is built on a zero trust architecture designed to enhance the user experience and simplify IT network management.

Seamless user experience

The platform-level integration between NetMotion & Okta helps organizations reduce the IT friction they often experience keeping their employees securely connected. With Okta's intelligent multi-factor authentication seamlessly integrated with NetMotion's SDP and experience monitoring platform, employees are able to get connected and stay connected, easily.

A zero trust approach

This collaboration ensures that any company using solutions from both Okta and NetMotion will enjoy the benefits of a seamless Zero Trust approach to security, allowing their workforce to easily and securely access the applications and services they need, no matter where they work. Every connection made is secured at the device & the resource with a real-time contextual analysis.

Designed for joint customers

Okta and NetMotion serve many government agencies and large corporate customers. These organizations have encountered an enormous need to simplify the way that end users connect to corporate resources. As a result, they're leveraging the joint Okta + NetMotion solution, allowing employees to access to mission-critical applications faster and more effectively.

NETMOTION + okta

Your organization needs to future-proof the way your employees work. Okta and NetMotion have the solution. At the office. At home. On the road. Enable your employees with frictionless secure remote access.
