

Identity is accelerating digital trust

In today's digital-first world, customers and citizens are being asked to share their data in new ways and for new purposes. While most are increasingly comfortable interacting online, they expect secure, consistent services in return for their valuable personal information.

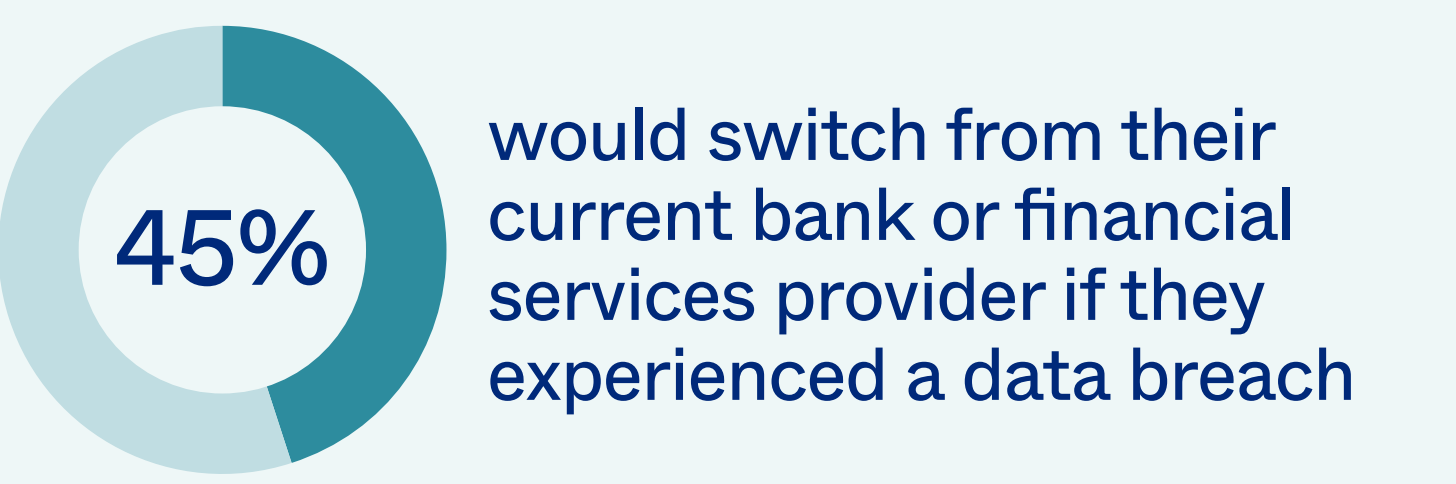

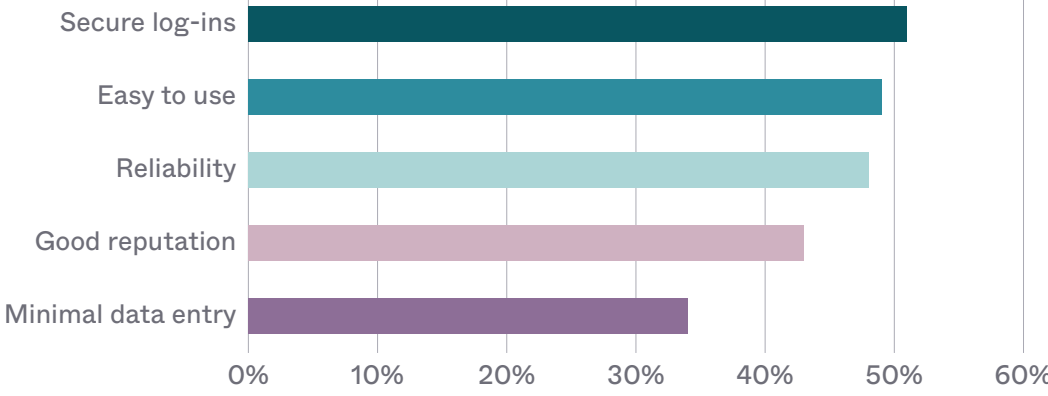

These seamless digital experiences are critical to securing trust – and our survey of 1,000 customers in Ireland* shows they start with identity.

Secure login is the #1 driver of digital trust

Trust starts with the very first interaction: the ability to log in securely was the top attribute driving digital trust among customers in Ireland.

Top drivers of trust in online interactions

Average figure across all sectors surveyed: retail, financial services, travel, government, healthcare and utilities.

Digital IDs are winning acceptance

For governments, trust in digital IDs and vaccine passports is critical to protect citizens from the pandemic.

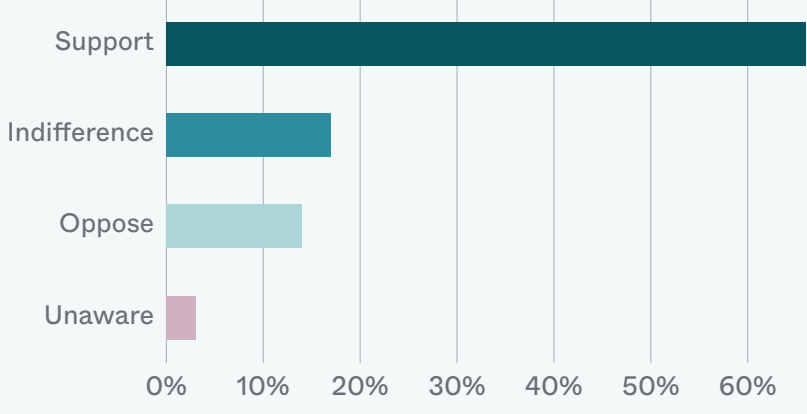

4 in 5 Irish citizens would be comfortable with having their personal data incorporated in a digital ID

Why comfortable? Why uncomfortable?

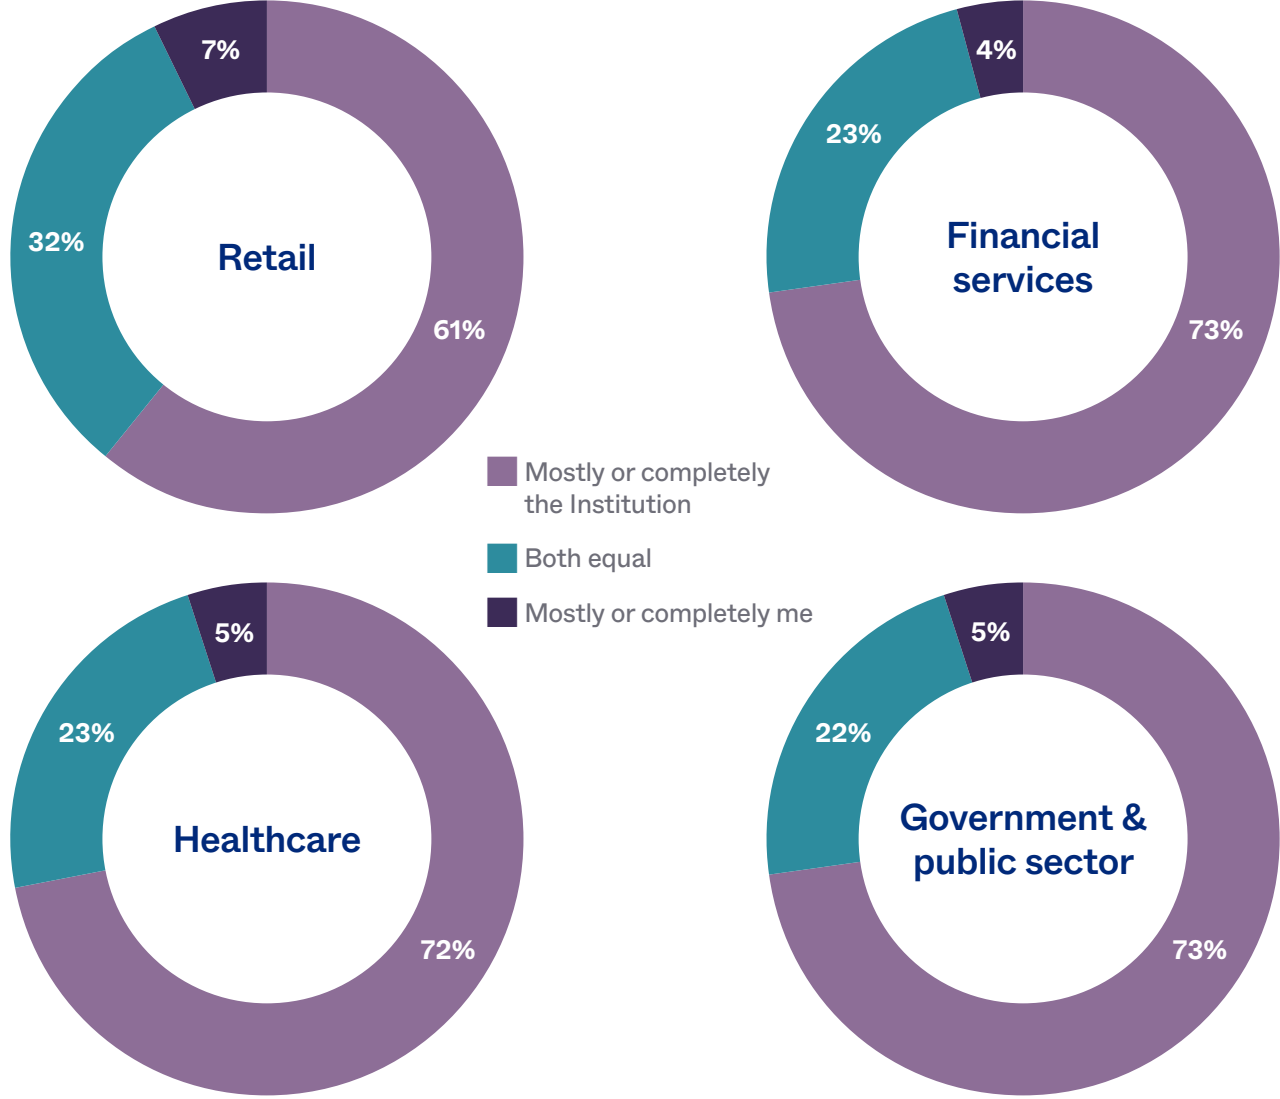

How do people feel about government-led vaccine passport technology?

For most Irish citizens, vaccine passports are their first experience of a digital ID, and two-thirds support them.

Customers hold you responsible for their personal data

In every sector, customers in Ireland believe the responsibility for protecting their personal digital identity and data lies mostly with the institution, rather than themselves.

5 ways to secure trust with CIAM

Seamless digital experiences build trust. Here are 5 ways a secure customer identity & access management (CIAM) solution like Okta's can transform yours – and drive long-term growth.

- 1 Focus on UX**
