Okta FastPass

Passwordless authentication into everything you need to get your job done, across all devices

**Okta FastPass** enables secure passwordless authentication into anything you need to get your work done, on any device, from any location. Utilize Okta FastPass to minimize end user friction when accessing corporate resources, while still enforcing Okta’s adaptive policy checks.

**Why use Okta FastPass?**

Enabling secure, device-based access is a challenge for many organizations, especially with the influx of new device types across mobile and desktop platforms. With Okta FastPass, you benefit from:

- **Always On Passwordless.** As long as the device is registered to Okta, users get passwordless authentication to any app, from any location.

- **Using any directory or enterprise mobility management tool (EMM).** Although not required, Okta FastPass can be combined with your existing user/device directory or EMM. Still using AD? Not a problem. Using an EMM to manage mobile devices or laptops? We can work with that. Check if devices are managed before users get the passwordless experience delivered by Okta FastPass.

- **End to end passwordless.** When users are on devices which support biometrics for login (Windows Hello, Touch ID on Mac), they log into the device with no password, register the device to Okta with no password, and access all apps with no password.

**Supported use cases**

Many organizations use a combination of different tools for device management, but the good news is that Okta FastPass can work alongside a wide range of use cases. Okta FastPass can be combined with the following deployments to check if a device is managed before delivering passwordless auth:

- Windows devices that are Azure Active Directory joined/Hybrid AAD joined + EMM/MDM managed (VMware Workspace ONE, Msft Intune, System Center Configuration Manager, MobileIron etc)

- MacOS devices managed by Jamf Pro

- Mobile devices (iOS, Android) managed by an EMM/MDM (Intune, VMware Workspace ONE, MobileIron etc.)

...and many more!
