

Okta for US Military

The DoD's mission-ready Identity partner

The Department of Defense (DoD) has an immense user base as the largest government agency — and as the agency tasked with protecting the country's national security. Accordingly, digital transformation within the DoD needs to incorporate cyber resilience. With the focus shifting to user experience and its services extending further outside of traditional network environments, the DoD continues to adapt and refine its Zero Trust strategy. At the forefront of both priorities is the need for enterprise-managed Identities.

Identity is an investment in military readiness

It's critical to the DoD mission to provide information security protections across its Total Force: primary workforce, extended workforce of contractors, allies, veteran population, and beneficiaries. Recognizing the unique challenges the Department faces in doing so, Okta designed a tailor-made solution.

Okta for US Military is a purpose-built Identity platform for the DoD and its mission partners. Okta's achievement of an Impact Level 4 (IL4) conditional Provisional Authorization (PA) provides a next-generation security

architecture that centralizes and secures access to mission-relevant resources for approved users — anywhere, anytime.

Architectural alignment.

Built on Zero Trust principles by design, security controls and access policies are risk-based and automated for the more agile, more mobile, cloud-supported workforce.

Federated Identities.

Optimize use of IT talent by scaling unclassified or internet-connected Identity use cases across the CAC and non-CAC community through Single Sign On (SSO), or YubiKey through Adaptive Multi-Factor Authentication (MFA).

Future-proof integrations.

Connect to the most secure integrations, on-premises or in the cloud, including those supporting IL4 and IL5 workloads (ServiceNow, Salesforce, Zscaler, O365, and others) as well as other Identity providers (IdPs).

Modern security.

Higher levels of assurance include built atop AWS GovCloud, hosted on Okta.mil — a secure .mil web domain, and network traffic that is DISA-approved.
