# Safe harbor

This presentation contains “forward-looking statements” within the meaning of the “safe harbor” provisions of the Private Securities Litigation Reform Act of 1995, including but not limited to, statements regarding our financial outlook, long-term financial plans, product development, business strategy and plans, market trends and market size, opportunities and positioning. These forward-looking statements are based on current expectations, estimates, forecasts and projections. Words such as “expect,” “anticipate,” “should,” “believe,” “hope,” “target,” “project,” “goals,” “estimate,” “potential,” “predict,” “may,” “will,” “might,” “could,” “intend,” “shall” and variations of these terms and similar expressions are intended to identify these forward-looking statements, although not all forward-looking statements contain these identifying words. Forward-looking statements are subject to a number of risks and uncertainties, many of which involve factors or circumstances that are beyond our control. For example, the market for our products may develop more slowly than expected or than it has in the past; there may be significant fluctuations in our results of operations and cash flows related to our revenue recognition or otherwise; we may fail to successfully integrate any new business, including Auth0, Inc.; we may be unable to retain key personnel;

global economic conditions could worsen; a prior or future network, data or cybersecurity incident that has allowed or does allow unauthorized access to our network or data or our customers’ data could damage our reputation, cause us to incur significant costs or impact the timing or our ability to land new customers or retain existing customers; we could experience interruptions or performance problems associated with our technology, including a service outage; and we may not be able to pay off our convertible senior notes when due. Further information on potential factors that could affect our financial results is included in our most recent Quarterly Report on Form 10-Q and our other filings with the Securities and Exchange Commission. The forward-looking statements included in this presentation represent our views only as of the date of this presentation and we assume no obligation and do not intend to update these forward-looking statements.

Any products, features or functionality referenced in this presentation that are not currently generally available may not be delivered on time or at all. Product roadmaps do not represent a commitment, obligation or promise to deliver any product, feature or functionality, and you should not rely on them to make your purchase decisions.

# Welcome to the Okta Workforce and Customer Identity Cloud Product Release Overview

## Q4 2023

Welcome back to Okta's Quarterly Release Overview! 2023 has come to an end, and we're excited to showcase all of our Q4 innovations from October — December.

Dive into the latest announcement and read about the new capabilities, including Okta Privileged Access, enhancements to Least Privileged Access, heightened security with phishing-resistant capabilities, and powerful integrations to extend Okta Identity processes and modernize user experiences.

# Navigating the Overview

The Release Overview has two main sections with the following contents:

- Okta Workforce Identity Cloud overview
- Spotlight
- Feature overviews
- Developer resources
- Learn more

- Okta Customer Identity Cloud overview
- Spotlight
- Feature overviews
- Support updates
- Developer resources
- Learn more

# Workforce Identity Cloud

The Okta Workforce Identity Cloud enables customers to deploy an Identity-powered security model, unlock business automation, and modernize IT for their employees, contractors and business partners.

This quarter's new capabilities emphasize our investments to protect our customers' most sensitive users and resources, helping them adhere to the principles of Zero Trust, least privilege access for all resources leveraging a single control plane.

# Spotlight: Okta Privileged Access

Least privilege access for your most critical systems.

Available in: Okta Privileged Access

## What is it?

Okta Privileged Access provides unified access and governance for privileged resources — whether on-prem or cloud — as well as increased visibility, compliance, and security without compromising user experience.

### Customer Challenge:

Organizations of all kinds need to protect their most critical resources with least privilege controls that increase security and help meet regulatory requirements — all without relying on fragmented experiences across disparate tools. This means a boost in security and IT productivity and a newfound agility for workforces who no longer have to navigate multiple end-user experiences.

### Benefits:

Okta Privileged Access empowers IT and security teams to mitigate the risk of unauthorized access, streamline security operations, and support compliance with regulatory requirements.

## Why this matters

- Elevate security infrastructure and helps provide controlled access to critical systems, applications, and data.
- Unlock a single control plane for managing access across all applications, resources, and infrastructure with a unified solution.
- Eliminate the Identity silos that hamper productivity, and drive better security and compliance outcomes.
- Boost IT productivity as admins no longer need to manage manual integrations, and increase agility for workforces who no longer have to navigate multiple end-user experiences.
- Maintain least privilege without relying on fragmented experiences across disparate tools.

## How to get it

- Available with the Okta Privileged Access SKU
  - Customers purchase a quantity of Resource Units which can be used across any mix of supported Resources.
- At a minimum, customers must have Universal Directory.

Rule Name	Access Type	Conditional

# Workforce Identity Cloud Capabilities

The Workforce Identity Cloud (WIC) is a unified solution that ensures the right people have access to the right resources — with least standing privileges — at the right time and in the right context, re-assessed continuously. All while delivering an delightful experience for admins and users.

Learn more about our new WIC capabilities released in Q4 2023.

# Access Management

General Availability

## Desktop MFA for Windows

*Feature of: Okta Device Access / Available in: Device Access*

Enforce an additional layer of security with MFA on top of a credential login at the desktop unlock screen for Windows.

OIE

## Desktop Password Sync for macOS

*Feature of: Okta Device Access / Available in: Device Access*

Sign in to your macOS local account with your Okta password.

OIE

## Sign-in Widget (SIW) Gen 3

*Available in: All SKUs*

The Okta Sign-In Widget is a JavaScript library that gives you a fully-featured and customizable sign-in experience, which you can use to authenticate users on any website.

OIE

Okta Device Access – Desktop MFA for Windows

# Access Management

Early Access

## Block Insecure Enrollment Channels for Okta Verify OIE

*Feature of: Okta Verify*

Push end users to use more secure Okta Verify and FastPass enrollment options that are more resistant to phishing and other Identity-based attacks.

## Custom Admin Roles for Application Management OIE

*Available in: All SKUs*

Add more granular admin controls for managing application configurations in provisioning settings to support for least privilege access.

## Desktop MFA for macOS OIE

*Feature of: Okta Device Access / Available in: Device Access*

Enforce an additional layer of security with MFA on top of a credential login at the desktop unlock screen for macOS.

### Enrollment options

Users can enroll in Okta Verify using

# Identity Governance

General Availability

## AD Agent Auto-Update

Feature of: *Okta Active Directory Agent*

Take advantage of the most secure and latest Active Directory Agent capabilities and simplify admin ease of use.

Classic

OIE

### Add new schedule

Name:

AD Agents: Primary

When a new version is available, allow agent auto-updates on:

Example: if a new version releases on Tuesday, auto-update on the upcoming Friday.

Fridays

between

9:00 PM

and

4:00 AM

(next day)

Time zone:

America: Los Angeles (PST)

AD Agent Auto-Update

# Platform Services

General Availability

## Headless Access to Okta AWS CLI

Classic

OIE

Enable users to attach the AWS CLI to other headless processes, such as your CI/CD pipeline. It can also be aligned to best practices for secrets management so only certain apps and operators can access its credentials. It also allows interactive and programmatic sessions to coexist with proper authorization.

## Interactive Reports

Classic

OIE

Leverage five new Admin Console reports to better understand users, groups, application assignments, and MFA enrollment for improved visibility and flexible filters to understand and analyze key Universal Directory objects.

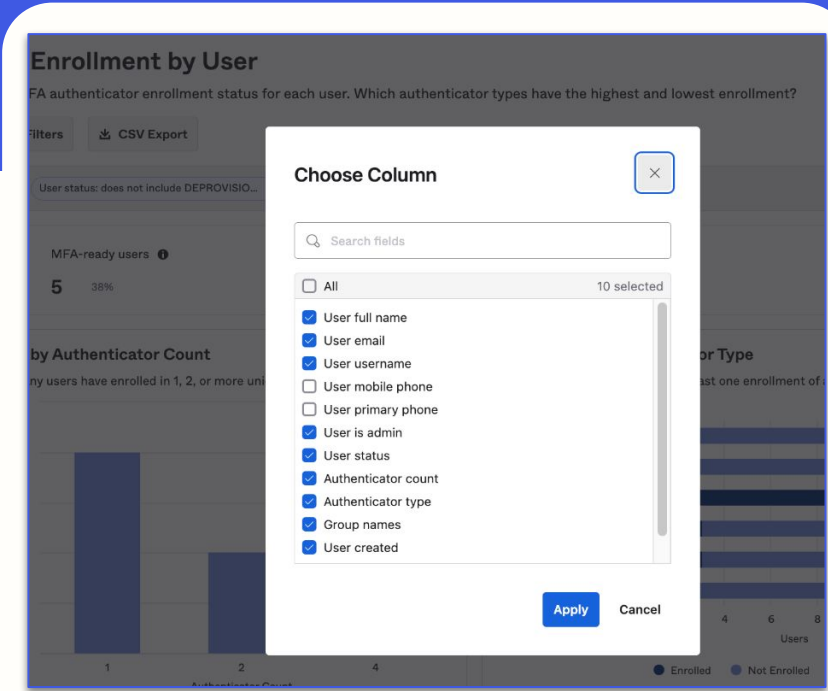

## Product Offers (Lifecycle Management)

*Available in: Lifecycle Management*

Classic

OIE

Trial Okta Lifecycle Management in your production or preview org for 30 days. Eligible customers can access the product offer via a notification on their admin dashboard.

Interactive Reports

# Platform Services

General Availability

## Revamped Permissions UI

Classic

OIE

Improve the user experience for admin role creation for a scalable UI to accommodate new granular permissions and better layout to help super admins understand what permissions may be needed for a specific job to be done.

## OIE Self-Service Upgrade Tooling

Classic

Upgrade from Okta Classic to Okta Identity Engine (OIE) on your own time, with zero downtime. With this tooling, you can self-remediate nearly all actions required for an upgrade, and schedule the upgrade at a time that is convenient.

### Self-Service Upgrade to Okta Identity Engine

With self-service upgrade, you can check eligibility and schedule upgrade at your desired time. The upgrade is free, automatic, and zero down-time.

If you have any questions, please reach out to your Okta account representative or [contact support](#).

[Schedule upgrade](#)

OIE Self-service upgrade tooling

# Privileged Access

General Availability

## Okta Privileged Access (OPA)

*Available in: Okta Privileged Access*

Unify access and governance for privileged resources – whether on-prem or cloud – and increase visibility, compliance, and security without compromising user experience with Okta Privileged Access.

Classic

OIE

## Just-in-time (JIT) Infrastructure Access (OPA feature)

*Feature of: Okta Privileged Access / Available in: Okta Privileged Access*

Ensure users have access to systems and resources for the shortest time necessary, minimizing the window of vulnerability and enhancing overall security.

Classic

OIE

## Privileged Account Vaulting (OPA feature)

*Feature of: Okta Privileged Access / Available in: Okta Privileged Access*

Safeguard your organization's most critical accounts by securely vaulting and managing privileged credentials. This feature protects against unauthorized access and mitigates the risk of credential misuse.

Classic

OIE

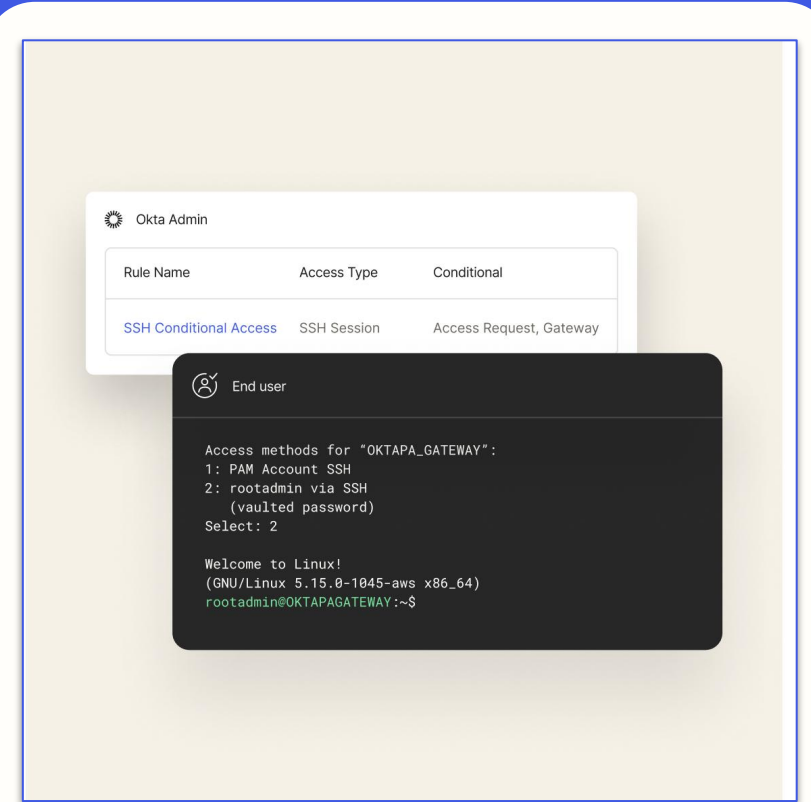

## Privileged Access Request (OPA feature)

*Feature of: Okta Privileged Access / Available in: Okta Privileged Access*

Empower your team with the ability to request and obtain privileged access swiftly and securely. Our streamlined process ensures that access is granted only when needed, reducing the risk of unauthorized usage.

Classic

OIE

Just-in-time Infrastructure Access (OPA feature)

# Privileged Access

General Availability

## Transactional MFA (OPA feature)

*Feature of: Okta Privileged Access / Available in: Okta Privileged Access*

Increase control over authentication requirements to privileged resources through flexible policies.

Classic

OIE

## Session Recording (OPA feature)

*Feature of: Okta Privileged Access / Available in: Okta Privileged Access*

Keep a watchful eye on all privileged sessions with our session recording feature. Detailed logs and recordings provide visibility into user activities, aiding in forensic analysis and compliance requirements.

Classic

OIE

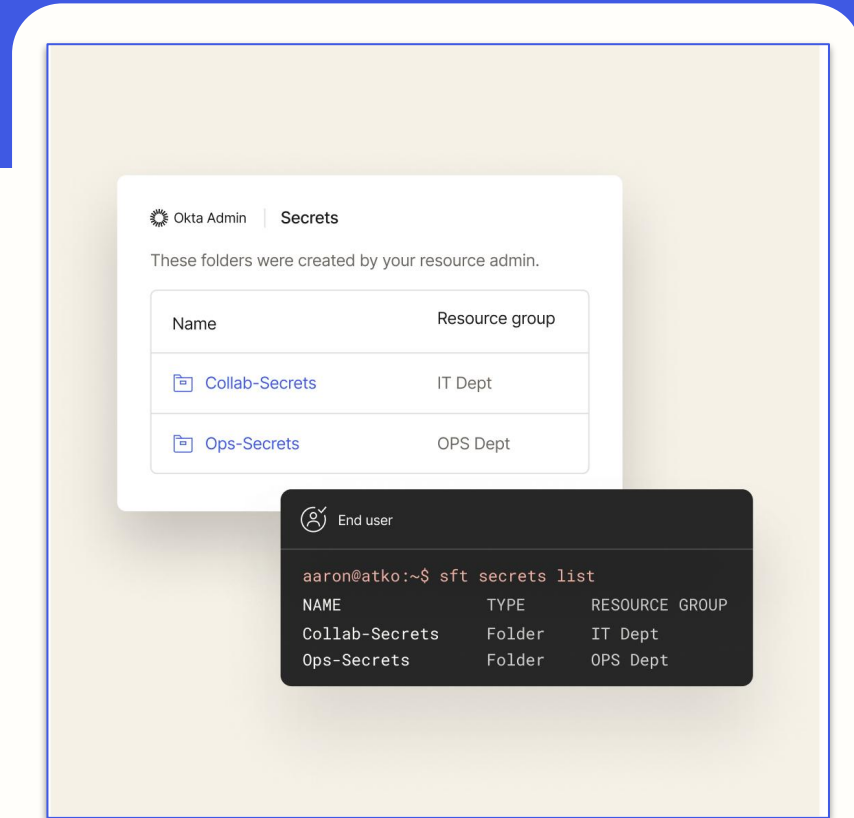

## Secrets Management (OPA feature)

*Feature of: Okta Privileged Access / Available in: Okta Privileged Access*

Securely store and manage sensitive information such as API keys, passwords, and encryption keys. Our secrets vaulting safeguards critical data from unauthorized access.

Classic

OIE

Secrets Management (OPA feature)

# Spotlight: Organizations

Allow your business customers to securely manage and customize how their end-users access apps

Available in: All B2B and Enterprise Plans

## What is it?

Organizations is a feature designed to enable our business-to-business customers to better manage their partners and customers, enabling them to customize how end-users access their applications.

### Customer Challenge:

As a business grows, their customer base becomes larger and more diverse. The ability to seamlessly manage multiple organizations, while improving efficiencies and maintaining growth, becomes even more critical.

### Benefits:

- **Unlimited** Organizations and Organization Members on Private Cloud deployments
- Kick off Organization Login flows with Organization Names in addition to IDs
- Fetch Organization Members along with their RBAC Roles for building multi-tenant administration dashboards into your SaaS apps

## Why this matters

Customer Identity Cloud supports over 4 million Organizations in a single cloud today and can scale to hundreds of thousands of their B2B customers.

### The sky's the limit:

In fact, now you can manage and customize Identity workflows for as many business customers as you want with the same performance and reliability that is expected from Okta.

## How to get it

- Learn more: <https://auth0.com/organizations>

# Spotlight: Password Reset Action

Supporting MFA in the password reset flow

Available in: Professional and Enterprise plans

## What is it?

The Password Reset/Post-Challenge Action is a new extensibility point for the Universal Login that enables organizations to introduce MFA to the password reset flow.

### Customer Challenge:

Password reset is a common attack vector bad actors will exploit to compromise user accounts. As a result, having greater assurance in the password reset flow is important to verify legitimate users from bad actors.

### Benefits:

- Enforce and specify a second factor needed to complete the password reset flow
- Redirect users to a third-party service for MFA or Identity proofing
- Introduce logic to block users from resetting their password

## Why this matters

Introducing a secondary factor in the password reset flow helps businesses protect their end users against account takeovers at a critical point in the account recovery process.

## How to get it

To learn more, check out our documentation page: <https://auth0.com/docs/customize/actions/flows-and-triggers/password-reset>

# Spotlight: Post-Login Action

Define the secondary factors presented to end users when they have multiple factors enrolled

Available in: Professional and Enterprise plans

## What is it?

The Post-Login Action is a new extensibility point for the Universal Login that enables organizations to define the specific secondary factors presented to their end users.

### Customer Challenge:

Businesses that deploy MFA want greater control over the experience. Currently, we default to the factor with the highest level of security.

### Benefits:

- Define secondary factors presented to end users based on contextual signals such as user, app, or organization attributes
- Align with your businesses security policies

## Why this matters

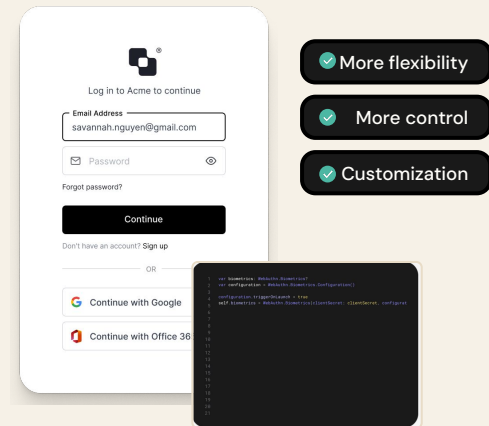

MFA is an important security measure used to ensure trust with end users. However, it should not compromise the digital experience.

By having greater flexibility over the MFA experience, businesses can design an authentication flow that makes sense for their end users and is in line with their organization's security policies.

## How to get it

To learn more, check out our documentation page: <https://auth0.com/docs/secure/multi-factor-authentication/customize-mfa-selection-nu>

And to get started with custom Actions for common use cases, you can explore our Actions Templates: <https://auth0.com/docs/customize/actions/actions-templates>

# Customer Identity Cloud Capabilities

Okta Customer Identity Cloud (CIC) is dedicated to ensuring that security comes first when it comes to providing seamless digital experiences. CIC enables organizations to take advantage of technologies that accelerate growth and provides tools to help teams successfully navigate the ever-evolving security landscape, while seamlessly protecting customer and business data.

# Authentication

General Availability

## Actions now has Account Linking

*Feature of: Actions/ Available in: All Plans*

Authenticate from any of their accounts and still be recognized by your app and associated with the same user profile.

## Guardian App Adds 40+ Languages for Localization

*Feature of: MFA/ Available in: Enterprise MFA, Adaptive MFA*

Supports all 40+ languages to match the entire Universal Login localization language set.

## Improved API Support for Language-Specific MFA Enrollment Tickets

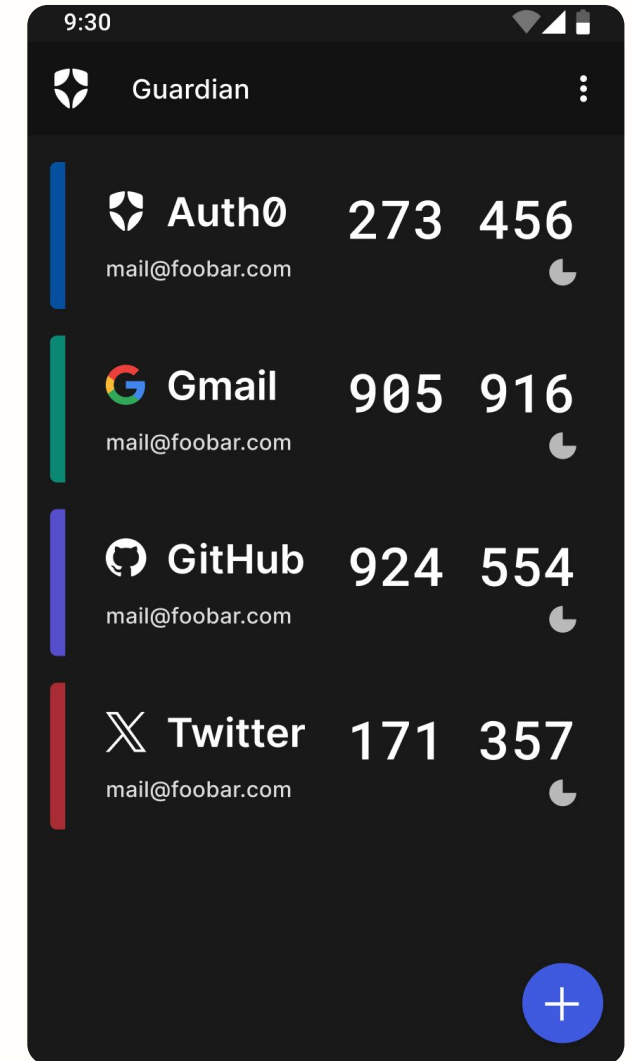

*Feature of: MFA/ Available in: Pro MFA, Enterprise MFA, Adaptive MFA*

Generate MFA enrollment tickets and render Universal Login enrollment prompts in a specified language.

## LinkedIn Social Connection V3

*Feature of: Social Connections/ Available in: All Plans*

Use this new connection strategy when creating new LinkedIn applications that require sign-in with LinkedIn using OpenID Connect.

Guardian App Adds 40+ Languages for Localization

# Authentication

General Availability

## Okta Access Gateway integration now available for Okta CIC

*Feature of: Single Sign-On Integrations/ Available in: Auth0 - Access Gateway*

Okta Access Gateway (OAG) is designed to extend modern Identity to legacy on-prem applications. Now, you can easily set up OAG to use Okta CIC as the Identity provider when accessing these on-prem applications.

## OpenID Connect Back-Channel Logout with Initiators

*Feature of: Session Management/ Available in: Enterprise Plan*

Easily implement end-user single-logout through direct communication between the Identity provider (IdP) and an application backend.

## Password Reset Action

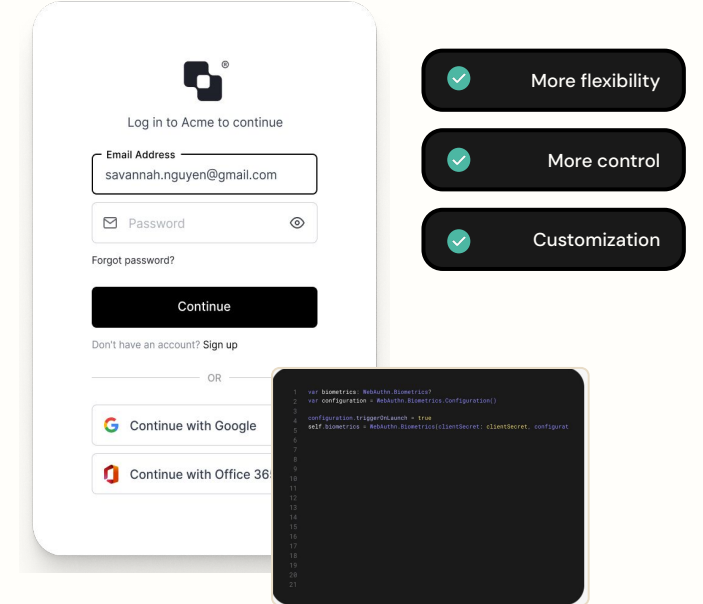

*Feature of: MFA/ Available in: Pro MFA, Enterprise MFA, Adaptive MFA*

Extend the password reset flow with an MFA challenge, a redirect, or a deny command to provide additional security and/or validation before the password is reset.

## Post Login Action

*Feature of: MFA/ Available in: Pro MFA, Enterprise MFA, Adaptive MFA*

Use the post-login action to easily define which secondary factor, or sequence of factors, your end users are challenged with for MFA in the login flow.

Post Login Action

# Authentication – SaaS Apps

General Availability

## Organizations

*Feature of: Organizations/ Available in: All B2B and Enterprise Plans*

Allow your business customers to securely manage and customize how their end users access apps, with the ability to add as many organizations as they need to their Customer Identity Cloud (Private Cloud) tenant.

Organizations

# Platform

General Availability

## Actions Templates

*Feature of: Actions/ Available in: All Plans*

Quickly customize your Identity solution with templates that enable you to deploy pro-code Actions within seconds.

## New Private Cloud Regions in Australia, Japan, and Indonesia

*Feature of: Private Cloud/ Available in: Private Basic, Private Performance*

Get support for Private Cloud deployments in Melbourne, Australia, Osaka, Japan, and Jakarta, Indonesia as part of continual geographical availability and reliability enhancements.

## Okta Workflows for Customer Identity Cloud

*Feature of: Actions/ Available for: Customers that have both Workforce Identity Cloud (UD and SSO), and Customer Identity Cloud (Enterprise Basic and up)*

Automate and customize Identity processes with no-code Workflows. Okta CIC now has an Actions Integration with Workflows, and Okta Workflows now has a connector with Okta CIC.

# Platform – Developer Experience

## Teams: Tenant Member Management, Early Access

*Core Product/ Available in: Self Service and Enterprise*

Manage your onboarding and off-boarding workflow of tenant dashboard members centrally.

## Teams: Administrator session timeout updated

*Core Product/ Available in: Self Service and Enterprise*

Reduced session timeout due to inactivity and also implemented a session age for administrator sessions on Teams dashboard to 12 hours.

The screenshot shows the Okta Teams Tenant Member Management interface. The top navigation bar includes the Okta logo, a 'Travel0 Team' dropdown, and links for 'Discuss your needs' and 'Documentation'. The left sidebar contains navigation options: Tenants, Members, Reports, Security (marked as EARLY), and Settings. The main content area displays the profile for Tracey Hansen, including her name, email (tracey.hansen@travel0.com), and a status indicator 'MFA ACTIVE'. A '+ Add Tenant Access' button is visible. Below the profile is a 'Tenants' section with a table listing tenant information.

Tenant Name	Environment	Region	Tenant Role
