

Okta + Zoom

Delivering Secure Video Collaboration for the Modern Workforce

As remote and flexible work grows, data breaches have surged. According to Verizon, 80% of breaches are now related to credentials¹. By integrating Zoom's world-class video communication platform with Okta's robust identity and access management solutions, enterprises get secure, seamless access to best-in-class tools. This partnership strengthens Zoom call security with end-to-end encryption, safeguarding sensitive conversations.

Through Okta's Secure Identity Integrations with Zoom, organizations are empowered to securely deliver cloud-native productivity and collaboration experiences. Together, Okta and Zoom empower remote users to collaborate efficiently and productively, without compromising on security.

Enable Collaboration Quickly and Securely Across Your Workforce

Enhance workforce productivity:

Users can start collaborating effortlessly from day one with Okta's Single Sign-On (SSO). They get instant access to Zoom's powerful tools—video meetings, voice, webinars, and chat—on any device. Okta's Adaptive Multi-Factor Authentication (MFA) adds a layer of security without sacrificing ease of use. Better yet, organizations can sync with user directories like Active Directory, Lightweight Directory Access Protocol (AD LDAP) and HR platforms to simplify deployment, providing users with secure, instant access to top tools.

Empower your teams to connect, reduce travel costs by 24%², and boost productivity anywhere, on any device with Zoom and Okta.

Increase IT efficiency:

Take the hassle out of IT operations by automating provisioning, de-provisioning, and profile updates. With Okta's pre-built integrations for Zoom available in the Okta Integration Network (OIN), IT teams can deploy Zoom instantly, streamline user management, and eliminate costly connector maintenance. Ready-to-use templates and workflows make it easy to quickly set up common Zoom needs. By automating access and simplifying onboarding, IT teams save time and reduce costs – up to \$1.6 million on helpdesk support and \$800,000 on provisioning each year³.

Adopt end-to-end security:

Adopt a Zero Trust approach without compromising user experience. SSO streamlines access, ensuring users reach only what they need, while Adaptive MFA strengthens security with robust protection. Adding another layer of defense, Okta's Universal Logout detects suspicious activity and enforces security in real-time—instantly revoking access across applications. This proactive approach safeguards data, secures communication, and reduces breaches, saving companies up to \$2.2 million annually on security issues⁴.

What are Secure Identity Integrations?

As credential-based security breaches rise, it's time to go beyond basic identity and access management. Okta offers the deepest integration capabilities to create end-to-end protection across your enterprise's most used applications – including Zoom.

Learn how to stay ahead of the latest identity security threats and scale effortlessly.

Case Study

Teach for America uses Okta to connect its network of staff, alumni, and more than 6,000 teachers to Zoom and other best-of-breed solutions that foster collaboration and community. "Our teachers need constant access to data and resources so that they can change and improve their strategies," says Harpreet Bajwa, managing director of business solutions at Teach For America. Okta provides instant access to the information and resources that Teach For America teams need, while keeping their personal data secure. Zoom provides a unified, streamlined experience that supports virtual classrooms, and delivers powerful tools for effective, efficient, and secure remote teaching, including fine-grained controls over screen sharing and in-class chat. Okta and Zoom work together to proudly support Teach for America's mission with a strong, flexible joint solution.
