Introduction

Congratulations, you are one step closer toward earning your Okta Certified Consultant certification!

This exam study guide is designed to help you prepare for the Okta Consultant exam. Passing this exam in addition to the Okta Professional and Administrator exams are requirements for attaining Okta Certified Consultant certification. Detailed exam topics and available preparation resources are outlined in this guide. Reading this guide in no way guarantees a passing score on the Okta Consultant exam.

Candidate Description

Okta Certified Consultants are technically proficient at implementing the Okta service in a variety of configurations. Consultants have experience integrating common applications, such as, Office 365, G Suite, Box, and Salesforce with Okta. They also have extensive knowledge and experience scoping and implementing complex Okta integrations involving multi-forest and multi-domain environments, advanced single sign-on (SSO), and inbound federation with Okta. Consultants have working knowledge of Okta APIs and custom configuration options.

The primary audience for the Okta Certified Consultant certification are individuals who hold the Okta Certified Administrator certification and are involved with implementing Okta. It is recommended that candidates for the Okta Certified Consultant certification meet the following requirements at minimum:

- 5+ years of experience in security administration for Identity and Access Management
- Six months of experience implementing Okta
- Successfully completed Okta Technical Consultant Bootcamp 1 & 2 or equivalent

About the Exam

Exam Format

Time allotted:	120 minutes
Exam Fee:	USD \$300. Same fee applies to retakes
Prerequisites:	Pass the Professional and Administrator Exams
Format:	60 Discrete Option Multiple Choice (DOMC) questions with case studies <ul style="list-style-type: none">• Information is provided in the form of case studies for many exam questions. Multiple questions may refer to a case study. Not all questions reference case studies.• Once a question is answered, you will not be allowed to modify your response.• You will be notified if you Passed or Failed the exam within 3 business days.• No Reference Materials allowed during testing.

Understanding DOMC Question Types

This exam uses **Discrete Option Multiple Choice** (DOMC) items. This item type is a powerful measurement tool, which produces test scores that can be counted on. It does so by removing several “contaminants” that affect test outcomes but are unrelated to the knowledge and skills being tested. The DOMC levels the playing field, more fairly measuring candidate skills by improving:

Readability. Because examinees have to read less, the exam tends to take less time and places fewer demands on the slow reader or the non-native speaker.

Fairness. When savvy test takers are unsure of an answer, they look for clues by comparing options or gleaning information from other questions in an exam. DOMC removes this test taking advantage and serves as a powerful method to assess actual examinee knowledge.

Security. Instead of showing all options at the same time, options are randomly presented one at a time. For each presented option, examinees click YES or NO indicating whether they think the option is correct. Examinees do not see the same options and in most instances do NOT see all available options. Limiting item exposure makes it difficult to steal the exam and minimizes the security risks that cheating can introduce to a certification program.

Scoring

Test takers can rest assured that the new item type is scored fairly and with precision.

- If a test taker is presented with a correct option, and responds YES, then that response is scored as “correct”.
Items may require 1 or more of these correct responses for the item to be completed and to be considered as answered correctly. Typically, however, only one correct response is required.
- If a test taker is presented with a correct option, and responds NO, then that response is scored as “incorrect”.
- If a test taker is presented with an incorrect option, and responds YES, then that response is scored as “incorrect”.
- If a test taker is presented with an incorrect option, and the response is NO (technically, a correct response), scoring of the item is postponed, and another option is presented.
- At times, a correct or incorrect option may be presented but the test taker’s response will not be scored at all. This is done to breakup any feedback response that might give a clue as to the correctness or incorrectness of a response.

The DOMC format may require test takers to make some adjustments to their test-taking approach. The reward of such effort is confidence that those examinees who are certified are truly competent in the area tested and will represent excellence in the field.

Exam Scheduling

Certification exams are administered and proctored by Examity®. Okta has partnered with Examity®, a secure online proctoring service, to protect the integrity of its certification exams in the market. Online proctoring means that exams can be taken from most any location at a time that is convenient for you, without travel to a test center. Exams must be scheduled at least 24 hours in advance of the time you wish to sit for the test.

Consultant Exam Subject Areas
