

Hundreds of nonprofits rely on Okta to securely connect to the technologies and services that let them do their most important work.

Every nonprofit is on a mission to make the world a better place, and great missions deserve access to the best technology. Okta for Good does just that. The Okta Identity Cloud connects all your people (employees, members, volunteers, donors and partners) to every type of technology (cloud apps, custom apps, mobile apps, on-prem apps, laptops, desktops, mobile devices, and wearables).

Okta was born and built in the cloud and is delivered entirely as a service. Because of this, the Okta Identity Cloud can quickly scale to meet the needs of any size organization. Okta is always on and always available. And, Okta isn't tethered to the success of any proprietary applications; we provide the same level of care to every application in the Okta Application Network.

What the Okta Identity Cloud does for nonprofits:

- Increases the efficiency of IT teams by significantly reducing manual processes
- Provides all end users with seamless, 24/7 access to the apps and data they need
- Scales quickly to meet the growing needs of any size organization
- Enables nonprofits to securely engage with external users, including volunteers and donors
- Secures and empowers employees at your organization

By leveraging Okta's technology, nonprofits can focus on what matters most: their missions.

Okta is our front door.
It's our entryway into all
of the services and systems
that we need to do our job.

-Ian Cook, Head of IT, charity: water

Pricing

Okta knows that in your organization, every dollar matters. That's why we are proud to offer the following pricing for nonprofits:

- Okta offers any qualified nonprofit organization up to 25 free licenses for Okta IT products and preferential pricing for additional users/products
- Nonprofits are also eligible to receive 50% off public training courses

Okta's products uniquely benefit nonprofits.

Single Sign-On (SSO): Okta SSO provides a secure and user friendly way for end users to quickly access all their applications. With Okta SSO, IT teams don't have to waste their time on password support; they can focus on helping your organization achieve its larger mission.

Universal Directory: Employees, volunteers, donors, partners, board members, and others contribute to a nonprofit's daily success. But managing this diverse community can be difficult for IT teams. With Universal Directory, nonprofits have one, centralized place to manage all their end users, groups and devices, mastered from any number of sources.

Lifecycle Management: Okta Lifecycle Management automates the entire user lifecycle for all your internal and external users. You can create group rules so that employees, volunteers, donors and others quickly have access to the apps they need. And, you can automatically deprovision users so sensitive data remains safe.

Multi-Factor Authentication (MFA): Nonprofits often work with highly sensitive information, including PII. One of the best ways to prevent a security breach is to protect your front door. 24% of security breaches are avoidable with MFA. Okta MFA adds an additional layer of security to your apps and data. And, it includes a robust policy framework with contextual access policies, so you're only prompting users for a second factor when it's truly needed.

Eligibility: Okta for Good has partnered with TechSoup* to help review and validate the software donation requests that we receive. To be eligible, your organization must be registered with the local TechSoup partner in your country and be validated as a nonprofit organization. Please refer to TechSoup's country-specific Eligibility Guidelines before applying: <https://www.techsoup.global/techsoup-local-ngo-definitions>

Okta Mobility Management: Your employees may work remotely or onsite. But they still want (and need) seamless, 24/7 access to enterprise apps and data so they can do their best work. Okta Mobility Management fully integrates identity and mobility management; it provides users with secure access to all their apps from any device with a consistent user interface.

The Okta API Products: The Okta API Products are a complete identity "fabric" that enables seamless and secure engagement with your external users—members, volunteers, donors, etc. Nonprofits use the Okta API Products to build portals that connect multiple apps with one username and password, to secure their environments and to manage millions of external users. But most importantly, the Okta API Products enable IT teams to focus on finding the best technology for end users, rather than on building out an identity solution.

Most of our staff is working at a remote school partner site. It was incredibly important for all of our AmeriCorps members and staff to have access around the clock, and to have it be seamless. Okta was the piece that pulled it all together for us.

-Christine Sullivan, VP, City Year

*For more than 30 years, TechSoup has partnered with corporations like Okta to connect nonprofit, non-governmental organizations around the world to the technology tools, resources and knowledge they need. Learn more about how TechSoup's unique civil society capacity building programs link organizations and those who seek to support them at meet.techsoup.org.
