

## Connect HR & IT Systems to Automate Employee Onboarding through Offboarding

From new hires, to promotions, to terminations, HR systems are typically the most up-to-date systems of record for employee information and status. However, just because information is up-to-date in the HR system doesn't mean it's the case across IT systems and applications. Out of date information causes security risks and lost productivity for IT and employees. This problem has been compounded by the explosion of SaaS applications within organizations.

Okta's pre-built integration unifies HR and IT, using employee data and updates in Namely to inform the user lifecycle across IT systems, including Active Directory, SaaS and on-premises applications.

- **Automate provisioning** by assigning applications to an employee based on their group, role, or other attribute in the HR system

- **Dynamically update permissions** when employees change department, role or geographic location
- **Quickly deprovision** employees when they leave the company by automatically deactivating users across downstream apps, including AD

## Benefits

- **Increase IT efficiency** by automating account and app provisioning/deprovisioning
- **Accelerate employee productivity** by providing immediate access to apps on day one
- **Decrease security risk** when offboarding users by automatically deactivating apps
- **Improve data accuracy and fidelity** by directly syncing HR & IT systems
- **Reduce HR/IT team friction** by eliminating back-and-forth over data and processes
- **Configure Okta + Namely in minutes** via Okta's integration wizard

For more information on this integration, go to [okta.com/partners/namely](https://okta.com/partners/namely).
