In today’s landscape, organizations are adopting modern Identity solutions to control access to their apps – from SaaS, to IaaS, to mobile, and to custom apps. With the emergence of complex Hybrid IT and Multi-Cloud environments, organizations want to extend their access management controls to on-premise apps and improve user experience without requiring multiple solutions, and without changing how their on-premise apps work today.

Introducing:

**Okta Access Gateway**

Okta Access Gateway delivers Okta Single Sign-On and Adaptive Multi-Factor Authentication from the cloud to your on-premise web applications. Access Gateway supports the integration patterns natively supported by on-prem web apps – such as Kerberos, IWA, Header-Based authentication, and URL authorization – to provide security without requiring changes in their source code.

**Reduce costs**
Up to 80% reduction on TCO and administration costs*

**Improve security**
50% reduction in security breaches**

**Modernize platform**
By 2022, IDaaS will be the chosen delivery model for 80% of access management deployments***

Product Architecture

Access Gateway acts as a reverse-proxy and leverages Okta's cloud SSO and Adaptive MFA to control access to on-prem apps, using the patterns they natively support.

The solution has a simple deployment model that does not require additional middleware and database servers:

User Experience and Security

Benefit Highlights:

2. **Integrate with on-prem apps** without changing code using Kerberos, IWA, Header-Based, and URL authorization.

3. **Replace legacy SSO** with a solution that does not require additional middleware and databases servers.

4. **Provide consistent user experience** for access to on-premise and cloud apps, while enabling access from any device.

5. **Integrate with popular on-prem apps** such as Oracle E-Business Suite and PeopleSoft using a catalog of pre-built integrations.

6. **Enable remote access to applications from any device** while avoiding complex network solutions.
