**Okta + N2N**

Bring Simplified Lifecycle Management to Complex Campus IT Environments

Applicants, students, faculty, and staff roles within a campus community can be dynamic, as people move from one milestone event to another, and staying ahead of changes in their user data can be challenging. Ensuring that users always have the appropriate access to the resources they need means directly integrating with the campus Student Information System and other authoritative data sources to keep data synchronized in real time. But, building those integrations can take institutions weeks or months, plus ongoing maintenance and support costs. Okta and N2N have a better solution, collaborating to make it easy for institutions to automate data synchronization across campus systems, so that all constituents can seamlessly access the services they're authorized to use, with no delay. Seamless, secure, and turnkey integration is available today as a benefit for all educational institutions.

Identity-based people management that enables efficient automation

Okta, the leading identity provider for the enterprise, integrates with N2N's turnkey cloud integration platform Illuminate to simplify the process of provisioning campus populations with the cloud and on-premises resources they need. Illuminate seamlessly connects an institution's Enterprise Resource Planning solution (ERP) or Student Information System (SIS) with Okta's Universal Directory (UD) to provide a single source of truth for campus user data. With identity centralized, schools can then enjoy the benefits of Okta's lifecycle management tools, keeping login simple and secure for campus users while enabling group-based automated provisioning and deprovisioning that dramatically simplifies life for campus IT departments.

Events, such as:
New student or employee
Employment ends
Student graduates

Real-time integration

Automated lifecycle management

Student Information Systems (SIS)

Cloud Apps
+
All Other Apps

Together, Okta works with N2N's Illuminate to let you:

- Integrate campus identity data with a central cloud directory, keeping user profiles updated everywhere

- Automate provisioning to get campus users the software they need when they need it, without burdening IT with manual connections

- Provide students, faculty, and staff an easy Single Sign-On (SSO) login experience protected by strong Multi-Factor Authentication (MFA)

- Give IT teams fine-grained access control and lifecycle management tools to automate user access from onboarding through offboarding

How it works

Colleges and universities rely on ERPs or SISs, like Ellucian's Colleague and Banner and Oracle's Peoplesoft, to manage user data for students, faculty, and other campus groups. Okta and N2N help campus IT teams seamlessly integrate data in an SIS with other applications that need it, saving time and energy and helping campus groups access their resources quicker. N2N's Illuminate platform extracts campus user data from campus ERPs and SISs, creating a centralized user store in Okta's Universal Directory and updating UD from these sources on an ongoing basis. With Okta + N2N Illuminate, IT can seamlessly connect users directly to appropriate third-party software providers, and easily automate IT processes like provisioning new users, updating app permissions, syncing user profile updates across systems, and deprovisioning departing users.

Now higher education institutions can:

- Bring powerful lifecycle management tools to bear that automate essential IT processes, and decrease the need for manual work

- Increase productivity by giving students, faculty, staff, and other campus users intuitive self-service access to the software solutions they need

- Close security loopholes by automatically deprovisioning employees or students on their departure or graduation
