

Simple, Secure Authentication So Your Workforce Can Access The Apps They Need

IT teams want to provision their workforces to cloud and on-prem apps with ease, while avoiding unnecessary manual work. Employees want to move past the frustrating and unproductive task of having to sign on individually, every day, to every app they're provisioned for. What's needed is a single solution that simultaneously automates provisioning for IT teams and simplifies the sign-in process for employees, without sacrificing enterprise security.

Simplify provisioning and keep your workforce productive

Okta and Atlassian integrate together in a single solution that helps IT automate provisioning and provides simple, secure sign-on for employees. IT teams get SCIM provisioning to power user lifecycle management, from onboarding through offboarding, so they can set access policies centrally instead of provisioning end users individually. And employees get Single Sign-On (SSO) simplicity, letting them authenticate once to access individual Atlassian apps as well as to Atlassian Access, a suite of key Atlassian products.

Together, Okta + Atlassian let you:

- Provide intuitive SSO to apps, for employees and other authorized end users
- Provide SCIM provisioning to automate employee lifecycle management
- Through Atlassian Access, simplify sign-on even further to a suite of popular products
- Enable centralized access control for your teams without compromising user experience

Okta + Atlassian enable centralized control for IT teams

The Okta Identity Cloud provides zero-trust, identity-based tools to protect user identities, like SAML single sign-on, strong password policies, and enforced two-step verification, and automated SCIM provisioning gives IT firm control over the workforce's Atlassian Cloud app usage. IT teams can confidently set and enforce access policies centrally (incorporating imported group membership data from Okta) and provide more efficient lifecycle management, from simplified onboarding of new employees through automatic deprovisioning of departing ones.

Users enjoy safe, easy access to Atlassian apps in cloud and on-prem

Atlassian Access gives authorized users simplified access to a particular suite of key Atlassian cloud collaboration

tools that includes Jira Software, Jira Core, Jira Service Desk, Confluence, and Bitbucket. For individual Atlassian apps not currently part of Atlassian Access, like Trello, the leading project management application, the Okta integration brings the same SSO simplicity via direct integrations. Okta also integrates directly with on-prem apps like Jira on-prem, to provide simple, secure access for collaborators using locally-served software.

With Okta + Atlassian, enterprises can...

- Give employees and end users easy SSO access to all the Atlassian apps they love
- Arm IT teams with powerful tools to centralize employee provisioning
- Simplify sign-on even further to a collective suite of popular Atlassian collaboration tools
