# Okta + vmware®

VMware Workspace ONE and the Okta Identity Cloud: Accelerating the Journey to the Digital Workspace

The rapid adoption of SaaS and mobile applications coupled with powerful yet affordable mobile devices can supercharge employee productivity. IT teams want to enable employees to work whenever and wherever they want—but only if it can be accomplished securely. More and more apps and online services sit outside of the traditional corporate network and IT needs to provide employees with the right access to these modern cloud apps and on-premises apps, at the right time, on the right devices. Equally important, secure access can no longer come at the expense of the user experience. No organization should have to choose between the two.

By combining deep identity management from Okta with VMware's leadership in digital workspace, our integrated solution covers the full lifecycle for a user, regardless of device, app or data. The partnership enables product integration and support for customers including:

- **Contextual access management** capabilities powered by Okta's user-centric access control layer and VMware's device-centric access control layer.

- **Enhanced user experience** and application access by presenting SAML applications that customers have configured in Okta inside of Workspace ONE.

- **Okta's 5,500+ app and IT infrastructure integrations**, as well as Okta's self-service capabilities, give customers choice and employees a seamless user experience.

- **VMware and Okta experts are trained and equipped** with co-branded interoperability documentation to support customers as they deploy these solutions together.

End-to-End Conditional Access Policies for Applications

Endpoints — Enterprise Services — Integrated Contextual Access — Actions

- User
- App
- Location
- Network
- Protocol
- IP Reputation
- Enrollment
- Compliance

Permit access
Block access
Invoke MFA
Force enrollment
